Håkan Petersson

SAFETY RACK TO BE USED WHEN PAINTING EXTERNAL WINDOW-LEDGES, INWARD OPENED WINDOWS, WHEN RENOVATION WORKS ON FACADES.

Product facts, Safety rack

- Weight: 10 kg
- Material: Aluminium
- Adjustable
- Frame size: 900 -1920 mm wide, 880 – 1200 mm height

Time to mount and adjust: 30 seconds.

The adjustable extension parts are locked with screws. There are adjustable holders to be used if the inward opened windows are removed. There are also adjustable holders to be put at the bottom on the external windowsill. At the top crossbeam there is a snap-hook to hold a paint-pot. The rack is easily mounted in about 30 seconds.

The rack protects from falling. Useful not only for painters, but also for carpenters, masons and plasterers.

Advantages: low weight, easily mounted, adjustable, protects from falling = better safety. The rack replaces another person holding a safety rope. Better work result due to better way of work. Work can be done more conveniently which also means better result and higher quality on the work done.

According to Swedish labour safety legislation this safety rack must be used in the first place instead of using an extra person holding a safety rope.
